Creating Partnerships for Excellence

VOCATIONAL EDUCATION IN APPOMATTOX COUNTY

Supplement to the Times-Virginian | Wednesday, February 15, 1984

In Appomattox, the nation

Vocational education is central theme this week

The week of February 12 through 18 is National Vocational Education Week. This is an appropriate time to think about the importance of vocational education to our community and to our nation.

At a time when excellence in education is a top priority on the national agenda, the theme for the week VOCATIONAL EDUCATION: CREATING PARTNERSHIPS FOR EXCELLENCE clearly communicates the ideal link that should exist between vocational education and the community. Vocational education is charged with preparing people for work and achieves its goal of excellence through partnerships with students, community agencies, trade associations, business, and industry.

Vocational education is the fastest growing area of education today. More than 8,000 institutions offer vocational education programs with more than 17 million Americans currently enrolled. These young people and adults are preparing for a wide range of promising careers in many occupational fields including: industry, marketing, distribution of goods and services, agriculture, health, business, home economics and related areas.

Vocational education students form a partnership with instructors that reaches beyond the classroom into the workplace. They plan together for a variety of on-site or simulated work experiences to develop specific occupational skills and work habits. These experiences are reinforced by classroom instruction. Together these programs are designed to ensure future career success for participants.

Through partnerships with business and industry, vocational education instructors are able to give their students first-hand experiences on the job as a complement to their classroom instruction. These partnerships also increase the likelihood that program graduates will be able to find jobs in the businesses and industries related to their course of study.

Vocational education professionals benefit directly from partnerships as well as through industry internships and often through gifts of equipment and other assistance designed to help them upgrade their programs. The partnerships are essential for vocational educators to keep their programs in tune with workplace demands.

At the same time, businesses and industries benefit from the partnerships because they are assured that program graduates -- their potential employees -- will have the necessary skills to meet their requirements.

In our community today, partnerships with business are making it possible to design customized vocational-technical training programs to meet the new demands of the workplace, especially in high tech industries. One of the many examples of vocational education's full partnership with business and government is in the implementation of the Jobs Training Partnership Act (JTPA), a federal jobs training program. Vocational educators are represented on the Private Industry Councils (PIC), which set local policies for this program. In many communities, vocational education programs are providing the majority of training for displaced and unemployed workers who participate in the program. Vocational education programs contribute to the welfare of local communities by preparing citizens for the demands of a changing workplace. As community planners press forward to make decisions about the future, they must examine employment projections. The Bureau of Labor Statistics projects that in the coming decade less than 20% of the available jobs will require a baccalaureate degree. This makes it even more critical for vocational education to create new partnerships with industry and community agencies to plan together for realistic programs to meet these needs of the 1990's.

As the pace of technological, social and economic change accelerates, vocational education programs will need to strengthen existing partnerships and reach out to create new ones. National Vocational Education Week is an appropriate time for business and industry leaders to explore how they might work more closely with vocational education to achieve new standards of excellence for preparing future workers that are vital to their businesses and to the general welfare of our community.

AS THE WORKING WORLD into which today's students will enter continues to advance, so must the teaching methods and teaching equipment advance. Computers and other sophisticated equipment are an integral part of vocational education today. These students are learning to use a performance analyzer in the automotive mechanics shop at Appomattox County High School.

County's Voc Ed system is comprehensive

A comprehensive vocational education system is part of the Appomattox County Public Schools as evident by the 14 separate vocational programs being offered. These 14 programs are provided through six vocational services.

"It has been our purpose to offer a wide variety of vocational courses which provide skill development since a large majority of our graduates go directly to jobs," states Lloyd G. Walton, superintendent. Walton continues to stress the academic preparations of all students, but to those who do not choose further education after graduation he says, "We must prepare these persons for employment. If our schools don't do the job, much time and expense will be incurred to get the training or else these people enter the job market unprepared for this complex work world."

Richard B. Carter, director of vocational education for the Appomattox County Schools, also echoes this same philosophy. "Much of what we offer in vocational education helps to make the basic skills taught in our school system meaningful and purposeful to students," adds Carter as he beams with pride about a phase of education which he has devoted more than 30 years as a teacher and supervisor.

"We have got to offer quality programs with effective instructors and it is my opinion that our school board in Appomattox has given such supports," states the vocational director. He further declares, "Our system has 19 instructors who are dedicated and extremely competent in their area of instruction. This makes it a joy to develop our educational system here in Appomattox."

Donald Armentrout, principal of Appomattox County High School, reveals some additional information as to the importance of vocational education in Appomattox County.

"Approximately 85 percent of our students in grades 9-12 include one or more subjects in their high school program of studies," says Mr. Armentrout as he looks over a series of data compiled for his school. "Students for the most part complete a vocational program. The 1983 graduating class had slightly over 8(

(Continued on page 9)

The six vocational services and the fourteen programs are as follows:

Service	Program
Agricultural Education	Agricultural Science & Mechanics Agricultural Production Agricultural Machinery Services Horticulture
Business Education	Accounting & Computer Secretarial Administration General Office
Distributive Education	General Marketing
Consumer & Homemaking Education	Consumer & Homemaking Specialized Homemaking
Occupation Home Economics Education	Foods
Trade & Industrial Education	Auto Mechanics Drafting Electricity & Electronics
